

Task 2 :

Deployed link

<https://github.com/Emimo56/snake-game>

I learned that it is now very easy to develop games using AI.
We just have to give proper prompts to AI to let it know what is required.

I was using the Google AI studio but making mistake of entering the prompt in the playground area and it was giving me a very simple app.

Then I tried the section where it tells to build an app and before trying that I ask ChatGPT to generate a prompt for me to give to AI studio to create a game app.
It created a detailed prompt and that I pasted in it.

I noticed that when I use the words like jungle or something the appearance of app changes.
I mentioned like add sound, add fangs, add levels, etc.

I used the iterative method the most. But I also realized that when I use words like jungle, fangs, and I also told it to explore the best snake game and create a game like that.
