

Task 3 — Lecture Slide Generation Using LLMs

<https://github.com/Emimo56/Panvaversity-Projects/blob/main/project1/GAPS%26TheAgentFactory.pdf>

I started giving prompts to ChatGPT and a video link but ChatGPT does not take videos. I think it takes transcripts from video.. So I got the transcript which was in hindi and I pasted the contents in chunks (since it was not take every thing together).

I tried to use Google Gemini and I gave video link. It was able to understand the contents from there and it generated slides.. but I didn't like it.

So I tried it couple of times.. that it was not picking up the content and it was picking some AI videos in english by itself.

I tried to erase the chat from it and started again a couple of times.

I also tried to tell give me content of each picture shown one by one and when I approve that create a slide of it. It was working but the final ppt was having mistakes after like 3-4 slides.

So than again I keep on deleting the chat history and than it finally gave a good ppt file.
